Each pair of these gives rise to a new inquiry, namely, the connexion which exists between the two. Thus, it is practicable to consider separately, 1. The application of arithmetic to algebra, and of algebra to arithmetic. 2. That of arithmetic to geometry, and of geometry to arithmetic. 3. That of algebra to geometry, and of geometry to algebra. This will, at first sight, appear something like an undue quantity of distinction: nevertheless, with the exception only of the two-fold comparison of arithmetic with geometry, there is in it no degree of separation which cannot be fully justified, either as matter of necessity or convenience. The application of arithmetic to algebra is made in the very formation of the latter science, though based upon considerations neither known nor admitted in the former. But, nevertheless, those considerations are derived from arithmetic in this sense, - that the want of them is suggested by the imperfections of the latter, and the method of arriving at them by the manner in which those imperfections appear.
