

Growth Hormone of Pakistani Buffalo

By Sumbul Khalid

LAP Lambert Acad. Publ. Apr 2010, 2010. Taschenbuch. Book Condition: Neu. 220x150x6 mm. This item is printed on demand - Print on Demand Neuware - The administration of exogenous somatotropin (ST) has been shown to increase lactation performance in mammals ranging from laboratory animals to humans. Therefore, keeping in view the importance of this hormone in milk and meat production, somatotropin cDNA has been cloned from a Pakistani buffalo, sequenced and expressed. The sequence obtained has been used for comparative modeling. The amino acid sequence of the buST cDNA was deduced using online available softwares. Secondary structure was predicted using NNpred and Psipred servers. ClustalW was used to produce sequence alignments. The 3D structure of the protein was obtained using Deep View (Swiss PDB viewer) and Modeler software. The predicted structure was evaluated with Procheck_NT. This book would interest you if you are a biotechnologist, pharmacist, biochemist or interested in bioinformatics. It can help you in over-production and purification of any ST using the methodology described in detail. 108 pp. Englisch.

Reviews

A whole new e book with a new point of view. This is certainly for all those who statte there had not been a well worth looking at. I am just very easily could get a delight of looking at a created pdf.

-- Hyman Goyette

Undoubtedly, this is the best function by any writer. This really is for those who statte there was not a really worth reading. Its been written in an exceptionally basic way which is merely right after i finished reading through this book by which really transformed me, change the way i really believe.

-- Dr. Deonte Hammes DDS
